# A Path Transparency Observatory

- Problem: amplifying observations from multiple tools and campaigns into a coherent picture of middlebox impairment in the Internet

- Approach: integrate measurements with a unified data model and query interface

- Observatory (public release end 2016) to derive common *observations* about *conditions* on a given *path* at a given *time*

- *Watch this space:* https://mami-project.eu

- Or talk to Brian Trammell or Mirja Kühlewind (here this week)
